DAN DANILYUK

Full Stack Software Developer | Ruby on Rails • Python • AWS • AI / Agentic Workflows

dandanilyuk@gmail.com • dandanilyuk.com • linkedin.com/in/dandanilyuk • github.com/dandanilyuk • Harrisonburg, VA

PROFESSIONAL SUMMARY

Full stack software developer with 8+ years building back-end systems and scalable Ruby on Rails applications across startup, healthcare, and DoD environments. Works primarily in Ruby, Rails, scripting, and AWS, and picks up whatever other tools the job calls for. A generalist by nature who is equally happy diving deep when a problem demands it, and a firm believer in well-tested code. Motivated by shipping software that delivers real value, and brings a positive, collaborative attitude to work every day.

TECHNICAL SKILLS

Languages: Ruby, Python, SQL, Bash, JavaScript, TypeScript, C (maintenance), HTML/HAML/ERB, CSS/SASS
Frameworks & Libraries: Ruby on Rails, Hotwire (Turbo/Stimulus), Sidekiq, Node.js / Express
AI & Agentic Workflows: LLM API integration (Claude, OpenAI), agentic workflows, prompt engineering, RAG, Model Context Protocol (MCP), tool/function calling, AI-assisted development
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda), Docker, Kamal, Terraform, CI/CD, GitHub Actions
Data & APIs: PostgreSQL, MongoDB, RESTful APIs, GraphQL, SMART on FHIR, 3rd-party API integrations
Testing & Practices: RSpec, Capybara, TDD/BDD, SCRUM/Agile, code review, pair programming
Tools: Git/GitHub, AppSignal, DataDog, Linux, scripting & automation

PROFESSIONAL EXPERIENCE

Data Management / Configuration Control | CACI International Inc
Sep 2024 – Present

- Cut manual operational workload by 65% by designing and deploying Bash and Python automation across data delivery and configuration workflows.
- Own configuration and upkeep of high-availability production systems running mission-critical software, conducting validation and performance testing aligned with operational requirements.
- Maintained legacy C applications by triaging defects, implementing fixes, and shipping targeted enhancements without regressions.
- Streamlined data processing and delivery pipelines, improving the throughput and accuracy of customer-facing data products.

Software Engineer | Self-Employed
Mar 2022 – Sep 2024

- Architected and shipped scalable Ruby on Rails applications end-to-end, from MVP through production, owning back-end logic, data modeling, API design, and AWS deployment pipelines (EC2, S3, RDS).
- Validated multiple startup ideas through rapid prototyping and market testing, sharpening the instinct for building only what delivers real user value.
- Built hands-on expertise in AI and LLM tooling by integrating Claude and OpenAI APIs, RAG pipelines, and agentic workflows into working prototypes.

Software Development Manager | Trace First Inc
Jul 2021 – Mar 2022

- Led a distributed engineering team across in-office and remote time zones, owning architecture decisions, sprint planning, and code review.
- Mentored engineers and accelerated new-hire ramp-up, rolling out new tools and technologies that improved team velocity and code quality while keeping team morale high.

Software Engineer | CarePort, powered by WellSky
Dec 2020 – Jul 2021

- Built SMART on FHIR integrations connecting healthcare partners to improve patient care coordination, and integrated 3rd-party vendor products via RESTful APIs.
- Maintained CI workflows with comprehensive unit testing and automated deployments in a fully remote Agile environment.

Software Engineer | Trace First Inc
Apr 2018 – Dec 2020

- Developed, deployed, and maintained multiple production Rails applications in a SCRUM environment, owning CI/Git workflows for staging and production releases on AWS.
- Hunted down and re-engineered performance bottlenecks across SQL queries, computation, and image processing, measurably improving response times.
- Integrated 3rd-party APIs and performance monitoring (DataDog) to catch production issues before customers did.

Drafting, 3D Modeling, Welding & Manufacturing | SCOPOS Hospitality Group, M.H. Eby Inc
2012 – 2017

- Read blueprints, modeled in Autodesk Revit, and fabricated custom aluminum trailers, a hands-on background that shaped a blueprint-to-product approach to software engineering.

EDUCATION

Epicodus, Full-Stack Web Development (Jul 2017 – Feb 2018). 6-month immersive program in Ruby on Rails, JavaScript, and OOP; built production-quality applications using BDD, TDD, and pair programming.
